Hence, I am looking for helps to find a closed formula for the binomial expansion by simplifying $(1+1)^{1000} + w^2 (1+w)^{1000} + w^4 (1+w^2)^{1000} + w^6 (1+w^3)^{1000} + w^8 \dots$

I would like to find all the expressions that can be created using nothing but arithmetic operators, exactly eight $\$8\$$'s, and parentheses. Here are the seven solutions I've found (on the Internet)...

0 Can anyone explain why $\$1 \text{ m}^3$ is $\$1000$ liters? I just don't get it. 1 cubic meter is 1 times 1 meter. A cube. It has units m^3 . A liter is liquid ...

How many integers are there between $\$1,000$ and $\$10,000$ divisible by $\$60$ and all with distinct digits? I know that there are $8,999$ integers in total, and $\lfloor \text{frac} \dots \rfloor$

In pure math, the correct answer is $\binom{1000}{2}$. Here's why. Firstly, we have to understand that the leading zeros at any number system has no value likewise decimal. Let's ...

What do you call numbers such as $\$100, 200, 500, 1000, 10000, 50000$ as opposed to $\$370, 14, 4500, 59000$? Ask Question Asked 14 years ago Modified 9 years, 7 months ago

The way you're getting your bounds isn't a useful way to do things. You've picked the two very smallest terms of the expression to add together; on the other end of the binomial expansion, ...

It means "26 million thousands". Essentially just take all those values and multiply them by $\$1000$. So roughly $\$26$ billion in sales.

A hypothetical example: You have a $1/1000$ chance of being hit by a bus when crossing the street. However, if you perform the action of crossing the street 1000 times, then your chance of being ...
