What are the benchmarks for PV & energy storage systems?

The benchmarks in this report are bottom-up cost estimates of all major inputs to PV and energy storage system installations. Bottom-up costs are based on national averages and do not necessarily represent typical costs in all local markets.

How many inverters does a PV system use?

The DC cables are connected to 19 utility-scale central inverters, each rated at 4 MW ac, giving the PV system a rated AC power output of 76 MW ac, which corresponds to an inverter loading ratio of 1.32. The inverters are made in Europe in a plant that produces 250 of them each year. These inverters are not subject to import tariffs.

How many MW AC does an ESS battery storage system have?

When supplied with an energy storage system (ESS), that ESS is comprised of 80 pad-mounted lithium-ion battery cabinets, each with an energy storage capacity of 3 MWh for a total of 240 MWh of storage. The ESS cabinet includes a bidirectional inverter rated at 750 kW ac (four-hour discharge rate) for a total of 60 MW ac.
