The U.S. is on track to add 60 GW of clean energy capacity in 2025, according to developer projections. If those numbers hold, that would represent 26% growth, compared to 2023's ...

In total, new solar projects in 2025 are expected to make up more than 50% of the planned added utility-scale electric generation for 2025. Combined with planned battery ...

In 2025, capacity growth from battery storage could set a record as we expect 18.2 GW of utility-scale battery storage to be added to the grid. U.S. battery storage already achieved record ...

Additionally, 15,306 MW of energy storage are scheduled to come online in 2025. The largest share of capacity slated to come online in 2025 is from solar facilities (74%).

In 2025, capacity growth from battery storage could set a record as we expect 18.2 GW of utility-scale battery storage to be added to the grid. U.S. battery storage already achieved record...

In another record-breaking year for energy storage installations, the sector has firmly cemented its position in the global electricity market and reached new heights. From ...

Synthesis of Ember's key findings from 2025, tracing how clean electricity expanded, where new growth centres emerged and how technologies like batteries and ...

The American Clean Power Association reported that the United States added a record 1,602-MW of battery storage capacity in the first quarter of 2025, equivalent to the ...

US energy storage set a Q1 record in 2025 with 2 GW added, but looming policy changes could put that

Energy Storage Power Generation in 2025
