China's battery exports, including for EVs and energy storage, hit a record \$66.761 billion in the first 10 months of the year, according to data from energy think tank Ember.

The country is witnessing a 75% rise in global shipments of lithium-ion battery cells for energy storage, alongside exports exceeding \$65 billion in storage and electric-vehicle ...

China's sweeping reforms to its electricity market are rapidly transforming the economics of energy storage, driving a surge in both domestic deployment and global exports ...

China lithium-ion battery cells for energy storage tipped to jump 75% this year China dominates production as global, domestic demand climb Surge driven by data centres, ...

According to Reuters, China's lithium-ion battery exports reached record levels in the first ten months of 2025, driven largely by surging demand for stationary energy storage ...

The export volume of energy storage batteries has experienced a remarkable increase of 170%. This surge is attributed to several factors including trade policies, market ...

China's dominance in energy storage is set to reach new heights, with global shipments of lithium-ion battery cells for energy storage expected to surge by 75% this year, ...

China's battery producers are increasingly dominating global energy storage markets, with exports surging more than 220% year over year in the first half of 2025.

Demand for renewables and data centres has caused a surge in shipments of lithium-ion storage batteries, with Chinese firms exporting more than \$66 billion this year
