Net Solar PV electricity capacity additions by country or region, 2022-2024 - Chart and data by the International Energy Agency.

Here you can track how much solar PV generating capacity has been added in each location during a specified year and the total capacity operating by the end of the year.

Solar electricity capacity, million kilowatts, 2022: The average for 2022 based on 189 countries was 5.64 million kilowatts. The highest value was in China: 393.03 million kilowatts and the lowest value was ...

About this data Total solar capacity Total solar (on- and off-grid) electricity installed capacity, measured in gigawatts. This includes solar photovoltaic and concentrated solar power.

The worldwide growth of photovoltaics is extremely dynamic and varies strongly by country. In April 2022, the total global solar power capacity reached 1 TW, increasing to 2 TW in 2024. The top ...

Calculate energy production for selected sites. The Global Solar Atlas provides a summary of solar power potential and solar resources globally.

The International Renewable Energy Agency (IRENA) has reported that solar photovoltaic (PV) module prices have fallen 80% in the last decade, while installed capacity has grown from 40 GW to over 600 ...

The market includes a range of products such as solar panels, solar batteries, and solar inverters, which are used in residential, commercial, and industrial applications.

Data and analysis including a list of solar power in every country in the world, countries with the most solar
