How is energy used in Algeria?

Total energy supply (TES) includes all the energy produced in or imported to a country, minus that which is exported or stored. It represents all the energy required to supply end users in the country.

Does Algeria have enough electricity?

Algeria has enough electricity supply to meet its domestic consumption, given its substantial natural gas reserves and the predominant use of natural gas in power generation. Algeria's electricity exports are limited by its electric transmission capacity.

Does Algeria have solar power?

Algeria has renewable energy potential along its relatively long coastline on the Mediterranean Sea, which is suitable for wind, while desert regions offer significant solar power potential. Algeria has 13 hydropower plants, mainly located in the northern parts of the country, where rainfall is relatively plentiful.

How much natural gas did Algeria export in 2023?

According to the Energy Institute's 2024 Statistical Review of World Energy, Algeria exported about 1.9 Tcf of natural gas in 2023, most of which went to Europe. About 672 Bcf of natural gas was exported as LNG, and the remaining 1.2 Tcf was shipped via pipeline (Figure 13).²¹

Technological advancements, declining costs of energy storage systems, and supportive government policies further contribute to the expansion of the energy storage market in Algeria.

a great quantity, measure, or degree: not much to do; He owed much of his success to his family. a great, important, or notable thing or matter: He isn't much to look at.
