I have a table containing a unique ID field. Another field (REF) contains a reference to another dataset's ID field. Now I have to select all datasets where REF points to a ...

`<select onChange="javascript:doSomething();" > <option>A</option> <option>B</option> <option>C</option> </select>` Now, `doSomething()` only gets triggered when the selection ...

The function first tries to find the `<select>` with the id, then it will search for the `value_selected` in the `<select>` options and if it finds it, it will set the selected attribute returning ...

`SELECT 1 FROM table` What does this 1 mean, how will it be executed, and what will it return? Also, in what type of scenarios can this be used?

Using a `SELECT` statement with a searched CASE expression Within a `SELECT` statement, the searched CASE expression allows for values to be replaced in the result set ...

This Stack Overflow thread discusses the possibility of adding an option separator for select elements in HTML and provides insights from developers.

The simple difference between `select Into` and `Insert Into` is: `-->` `Select Into` don't need existing table. If you want to copy table A data, you just type `Select * INTO [tablename] from A.`

`SELECT * from employees WHERE NOT EXISTS (SELECT name FROM eotm_dyn)` So basically I have one table with a list of employees and their details. Then another table with some other ...
