In 2025, capacity growth from battery storage could set a record as we expect 18.2 GW of utility-scale battery storage to be added to the grid. U.S. battery storage already achieved record ...

Better yet, recent projections from the EIA forecast 18.2 GW of new utility-scale battery storage in 2025. Even without residential or commercial storage projects, this would be ...

US energy storage set a Q1 record in 2025 with 2 GW added, but looming policy changes could put that growth at serious risk.

How energy storage could solve the growing power crisis in the U.S. The opportunity is clear: with the right policy reforms, revenue ...

Texas and California continue to lead the market, with 61% of the total installed capacity in Q4, while the remaining 39% was installed ...

Texas and California continue to lead the market, with 61% of the total installed capacity in Q4, while the remaining 39% was installed across 13 states, expanding storage ...

While EVs still dominate battery demand, energy storage will make up about a fifth of the market by 2030, according to a forecast by energy transition consultancy Rho Motion.

Today, technology advances and dramatic cost decreases combine to set up battery energy storage as the savior for both renewables and the overarching electric grid as ...

How energy storage could solve the growing power crisis in the U.S. The opportunity is clear: with the right policy reforms, revenue mechanisms and investment frameworks, ...

Is there still a chance for power storage
