----

118 In order to replace text using regular expression use the re b function: sub (pattern, repl, string [, count, flags]) It will replace non-everlaping instances of pattern by the text passed as ...

0 You can use the following function to replace Character or String at a particular position of a String. To replace all the following match cases use String.prototype.replaceAllMatches() ...

160 If you want to replace multiple characters you can call the String.prototype.replace() with the replacement argument being a function that gets called for each match. All you need is an ...

What"s the difference between java.lang.String "s replace() and replaceAll() methods, other than the latter uses regex? For simple substitutions like, replace . with /, is ...

58 There"s no need to use replace for this. What you have is a encoded string (using the string_escape encoding) and you want to decode it:

23 use s = r.replace(/n/g," "); Get a reference: The "g" in the javascript replace code stands for "greedy" which means the replacement should happen more than once if possible

7 This function uses both the str.replace() and re ndall() functions. It will replace all occurences of pattern in string with repl in a case-insensitive way.

ECMAScript 2021 has added a new String function replaceAll. A long time ago in a galaxy not so far away, people used split + join or regular expressions to replace all ...

If you want to replace multiple words or characters from a string with a blank string (i.e. wanted to remove

characters), use regexp_replace() instead of multiple replace() clauses.
