58 There's no need to use replace for this. What you have is a encoded string (using the string\_escape encoding) and you want to decode it:

118 In order to replace text using regular expression use the re b function: sub (pattern, repl, string [, count, flags]) It will replace non-overlapping instances of pattern by the text passed as ...

160 If you want to replace multiple characters you can call the String.prototype.replace() with the replacement argument being a function that gets called for each match. All you need is an ...

ECMAScript 2021 has added a new String function replaceAll. A long time ago in a galaxy not so far away, people used split + join or regular expressions to replace all ...

23 use s = r.replace(/n/g,""); Get a reference: The "g" in the javascript replace code stands for "greedy" which means the replacement should happen more than once if possible

0 You can use the following function to replace Character or String at a particular position of a String. To replace all the following match cases use String.prototype.replaceAllMatches() ...

If you want to replace multiple words or characters from a string with a blank string (i.e. wanted to remove characters), use regexp\_replace() instead of multiple replace() clauses.

What's the difference between java.lang.String "s replace() and replaceAll() methods, other than the latter uses regex? For simple substitutions like, replace . with /, is ...

7 This function uses both the str.replace() and re\_ndall() functions. It will replace all occurrences of pattern in string with repl in a case-insensitive way.
