-----

Glass wafers can be made from a variety of materials including borosilicate glass, fused silica, and aluminosilicate glass. They are used as substrates in a variety of applications, including ...

Custom wafer glass substrates in quartz, BOROFLOAT® 33, BK7, and more. SEMI-compliant, ultra-thin options for semiconductor, optics, and MEMS applications.

For display or photovoltaic testing, select aluminosilicate wafers with AR or ITO coatings for light efficiency. UniversityWafer assists research teams in defining the correct wafer geometry, ...

We fabricate glass wafers from borosilicate, alkali-free, quartz, sheet, and optical glass materials for applications in the semiconductor industry and science.

A solar wafer is a thin slice of crystal that serves as the primary building block for solar cells. Typically made from silicon, these wafers are produced by slicing a larger block of silicon, ...

A comprehensive analysis of these wafers will illuminate the rationale behind their different use cases and highlight what to consider when selecting solar technologies for ...

At Swift Glass, we've honed our glass design and production capabilities for more than 80 years. Using the latest innovations in glass manufacturing technology, we can fabricate a wide range ...

At Swift Glass, we've honed our glass design and production capabilities for more than 80 years. Using the latest innovations in glass manufacturing ...

A comprehensive analysis of these wafers will illuminate the rationale behind their different use cases and highlight what to consider ...

With our competitive, high-end products we want to be one of the biggest manufacturers of multicrystalline solar wafers. In this way, SCHOTT Solar Wafer is paving the way for the ...

Buy glass wafer online: fused quartz, borosilicate, alumino silicate. Fast delivery worldwide with expert advice on wafer selection.
