---

It is easy to install and apply, can be used to establish better signal coverage range, enhances network bandwidth requirements, and improves indoor ...

Microcells: A microcell is a cell in a mobile phone network served by a low-power cellular base station (tower). Covers a limited area such as a mall, a hotel, or a transportation hub.

CableFree offers Band 46 5GHz LTE Base Station and Outdoor CPE devices for 4G/LTE operation in Unlicensed 5GHz spectrum, enabling smaller operators and private customers to ...

Small cells are exactly what you likely think they are: small cellular base stations designed specifically to add additional capacity over small coverage areas. They're often used ...

A small cell is a cellular base station that transmits and receives defined RF signals with low power in a compact solution.

Small and compact design make it easy for you to mount it to where you want to install it. Solid body and more flexibility: Rugged design meets military specifications to prevent ...

Microcells: A microcell is a cell in a mobile phone network served by a low-power cellular base station (tower). Covers a limited area such as a mall, ...

The base station's RF circuitry is housed in a small outdoor module known as a remote radio head (RRH) or remote radio unit (RRU). RRH performs all RF functions such as ...

These small cells are smaller, low-power versions of the larger "macro" base stations with their own radios and antennas that can be deployed indoors ...

Experience CableFree's 4G & 5G LTE Small Cell outdoor base stations with software-defined radio for great flexibility, high performance & low operation costs.

Small base stations (transceivers) can be fixed on a wall for indoor applications and small towers or lamp posts can be used for outdoor applications. Backhaul connections ...

The base station's RF circuitry is housed in a small outdoor module known as a remote radio head (RRH) or remote radio unit (RRU). ...

It is easy to install and apply, can be used to establish better signal coverage range, enhances network bandwidth requirements, and improves indoor and outdoor signal coverage across ...

Small and compact design make it easy for you to mount it to where you want to install it. Solid body and more flexibility: Rugged design meets military specifications to prevent dust, wind and other adverse ...

These small cells are smaller, low-power versions of the larger "macro" base stations with their own radios and antennas that can be deployed indoors or around a building where coverage is ...

Small base stations (transceivers) can be fixed on a wall for indoor applications and small towers or lamp posts can be used for ...
