The one without super hard-codes its parent's method - thus is has restricted the behavior of its method, and subclasses cannot inject functionality in the call chain. The one ...

Crafting an effective employee attendance policy is crucial for maintaining productivity and accountability. Discover strategies and templates to create a comprehensive ...

As for chaining super::super, as I mentionned in the question, I have still to find an interesting use to that. For now, I only see it as a hack, but it was worth mentioning, if only for the differences ...

An attendance policy is a set of rules and guidelines that outline an organization's expectations for employee attendance, punctuality, and absence reporting.

super() lets you avoid referring to the base class explicitly, which can be nice. But the main advantage comes with multiple inheritance, where all sorts of fun stuff can happen.

"super" object has no attribute "__sklearn_tags__". This occurs when I invoke the fit method on the RandomizedSearchCV object. I suspect it could be related to compatibility ...

In fact, multiple inheritance is the only case where super() is of any use. I would not recommend using it with classes using linear inheritance, where it's just useless overhead.

Learn to create a fair, compliant employee attendance policy, reduce absenteeism, and boost productivity with actionable tips and insights.

An attendance policy can help you improve individual and team productivity and control costs. Learn how to create effective attendance policies.

Discover the essentials of attendance policy: its definition, benefits and practical tips, plus download a free template to enhance your workplace efficiency.
