-----

A function is outside the namespace of the rest of the program. It is like a separate program that can have the same variable names as used in the calling program, and whatever it does to ...

About `__func__`: "The identifier `__func__` is implicitly declared by the translator as if, immediately following the opening brace of each function definition, the declaration: `static ...`

357 Function pointers in C can be used to perform object-oriented programming in C. For example, the following lines is written in C:

I have a function whose structure is similar to the above. I want to abstract task 3 into a function, `bar()`, but I wish to limit the access of this function to only within the scope of `foo(a)`.

A function declaration is the prototype for a function (or it can come from the function definition if no prototype has been seen by the compiler at that point) - it includes the return type, the ...

508 It's all about variable scoping. Variables declared in the self executing function are, by default, only available to code within the self executing function. This allows code to be written without ...

A callback function is a function which is: accessible by another function, and is invoked after the first function if that first function completes A nice way of imagining how a ...

I am trying to search how to pass parameters in a Bash function, but what comes up is always how to pass parameter from the command line. I would like to pass parameters ...

A function returns a value and a procedure just executes commands. The name function comes from math. It is
