-----

If the future is the result of a call to `std::async` that used lazy evaluation, this function returns immediately without waiting. This function may block for longer than ...

The error: `SyntaxError: future feature annotations is not defined` usually related to an old version of python, but my remote server has Python3.9 and to verify it - I also added it ...

The class template `std::future` provides a mechanism to access the result of asynchronous operations: An asynchronous operation (created via `std::async`, ...

```
future (const future & ) = delete; ~future (); future & operator =(const future & ) = delete; future & operator =(future & & ) noexcept; shared_future &lt;R&gt;; share () noexcept; // ...
```

To opt-in to the future behavior, set `pd.set_option("future.no_silent_downcasting", True)` 0 1 1 0 2 2 3 1  
dtype: int64 If I understand the warning correctly, the object dtype is ...

The `get` member function waits (by calling `wait ()`) until the shared state is ready, then retrieves the value stored in the shared state (if any). Right after calling this function, valid ...

Unlike `std::future`, which is only moveable (so only one instance can refer to any particular asynchronous result), `std::shared_future` is copyable and multiple shared future ...

Specifies state of a future as returned by `wait_for` and `wait_until` functions of `std::future` and `std::shared_future`. Constants

Checks if the future refers to a shared state. This is the case only for futures that were not default-constructed
