-----

I have a VirtualBox process hanging around which I tried to kill (KILL/ABORT) but without success. The parent pid is 1 (init). top shows the process as D which is documented as ...

For Linux &quot;defunct&quot; and &quot;zombie&quot; processes are the same. From man ps: Processes marked &lt;defunct&gt; are dead processes (so-called &quot;zombies&quot;) that remain because ...

Yes, you must call `set_current_state()` before calling `schedule()`, because otherwise the scheduler will not remove the task from the run queue (if you just want to ...

An uninterruptible process is a process which happens to be in a system call (kernel function) that cannot be interrupted by a signal. To understand what that means, you ...

A process performing I/O will be put in D state (uninterruptable sleep), which frees the CPU until there is a hardware interrupt which tells the CPU to return to executing the ...

When looking at the process with &quot;ps ax&quot; the stat column is &quot;Dl&quot; which means &quot;uninterruptible sleep (usually IO)&quot;. Is it possible to find out more details on what the process is ...

As you could read from that answer, setting the current process state to `TASK_UNINTERRUPTIBLE` is needed for make `schedule()` call, performed by that thread, to ...

Generally speaking, uninterruptible sleep states are considered undesirable. Under normal circumstances, they cannot be triggered by user applications except by accident (e.g, ...
